3 Starting rotations: ITAS TRENTINO

Each court diagram always shows the player lineup with the setter in position 1. The associated table gives a breakdown of that player lineup according to setter starting position, opposition setter starting position, and serving/receiving.

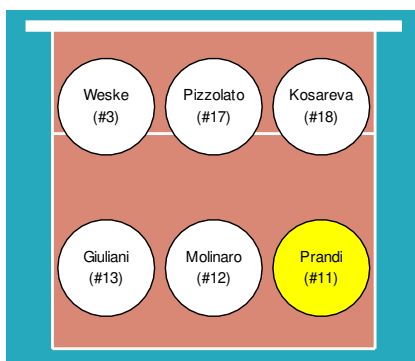

Most common starting lineup

Set	S/R	Setter in	Opp. setter in	N sets started	Rallies	SO%	BP%
1	Serving	1	1	1	27	80.0	52.9
2	Receiving	1	6	1	30	76.9	47.1
3	Serving	6	3	1	23	75.0	53.3

N sets started	%	Rallies	SO%	BP%
3	60	80	77.4	51

Second-most common starting lineup

Set	S/R	Setter in	Opp. setter in	N sets started	Rallies	SO%	BP%
4	Receiving	1	3	1	33	72.2	20.0
5	Receiving	1	3	1	16	100.0	63.6

N sets started	%	Rallies	SO%	BP%
2	40	49	78.3	38.5

7 Reception

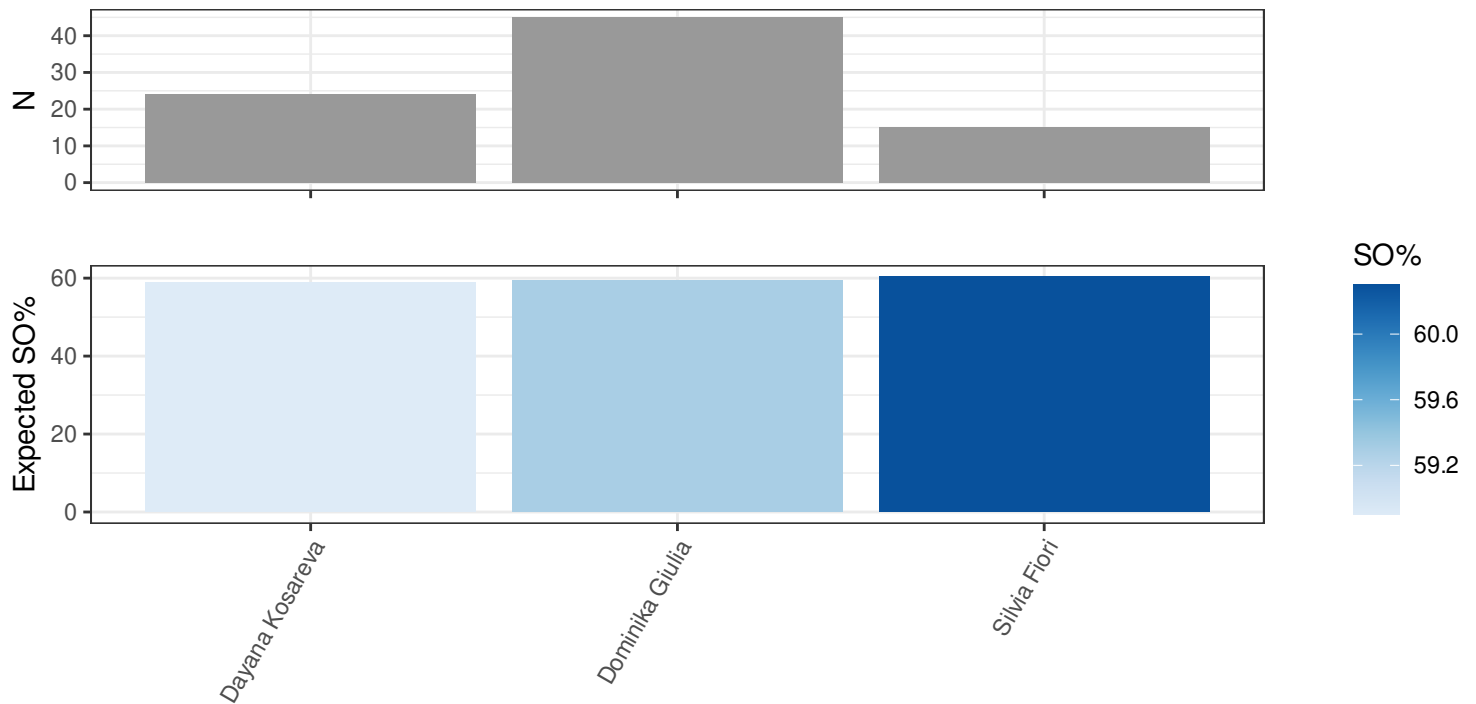

'Exp SO%' is the expected sideout percentage when a given receiver is passing, based on that receiver's pass evaluations and the league-wide SO% for each of those evaluations.

Number	Player name	N tot	SO% tot	Eff% tot	Exp SO% tot	N jump	SO% jump	Eff% jump	Exp SO% jump	N other	SO% other	Eff% other	Exp SO% other

	Pt win%		50	100		67											

8.1.2 On perfect or good reception

8.1.3 On OK reception

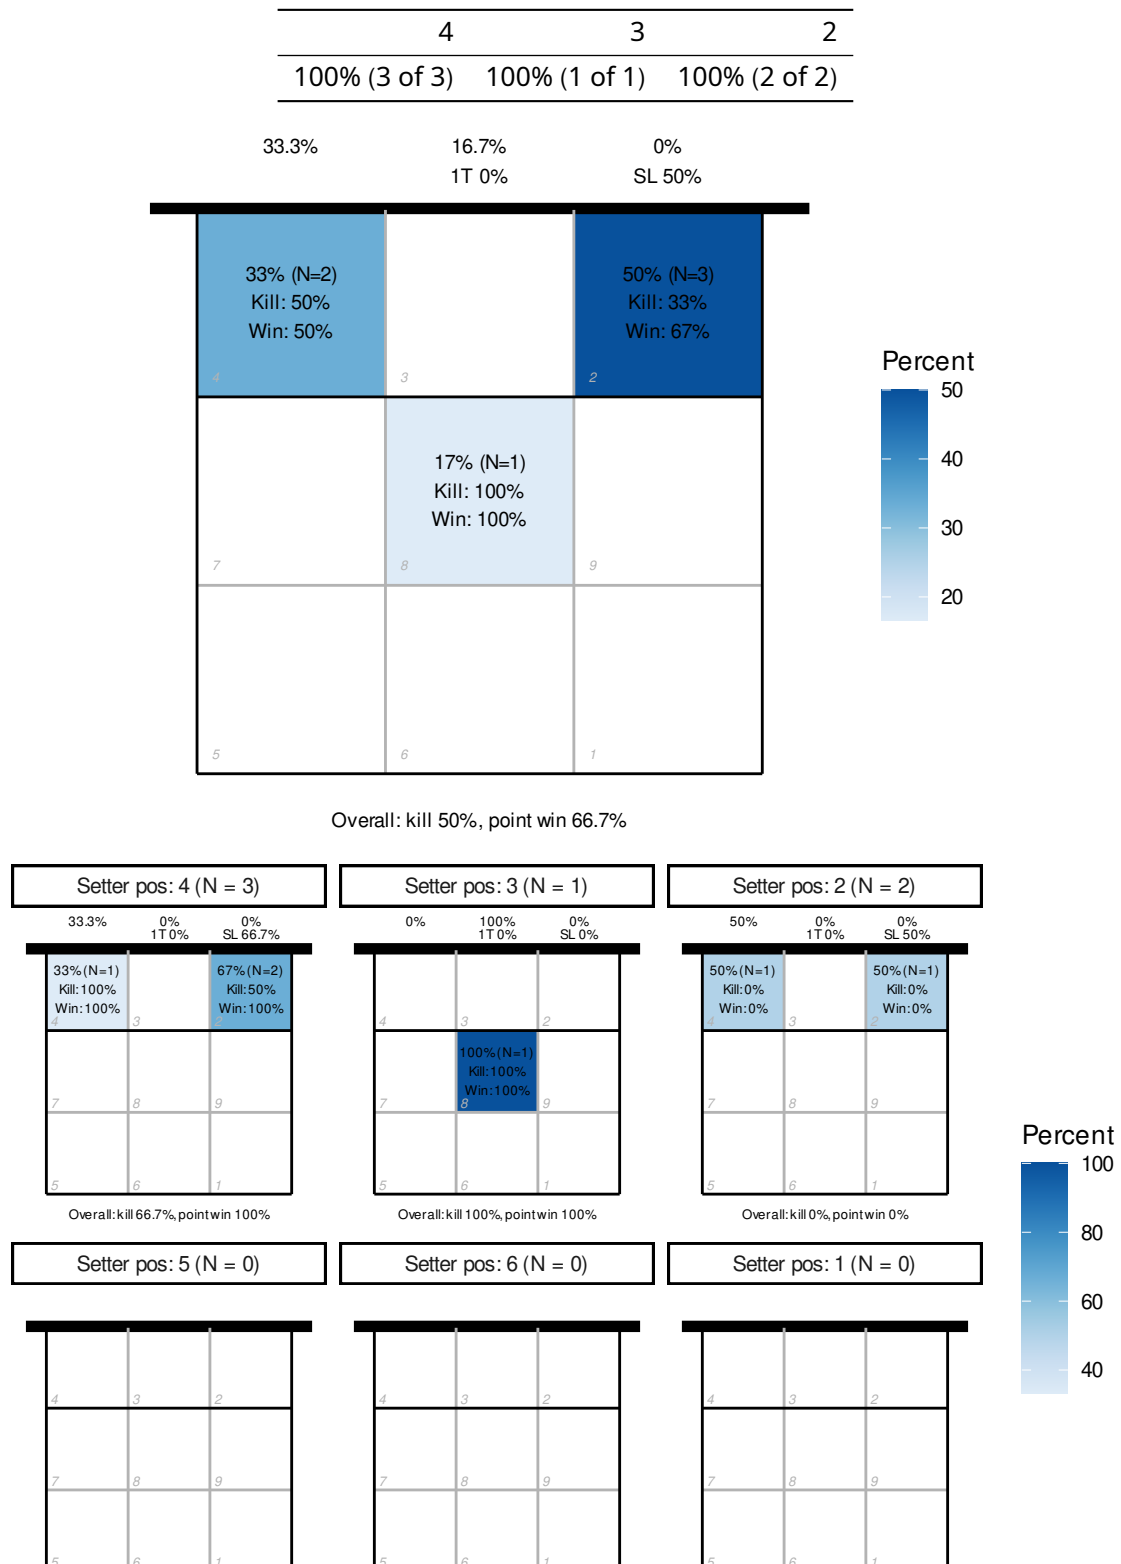

8.1.4 On poor reception

No data.

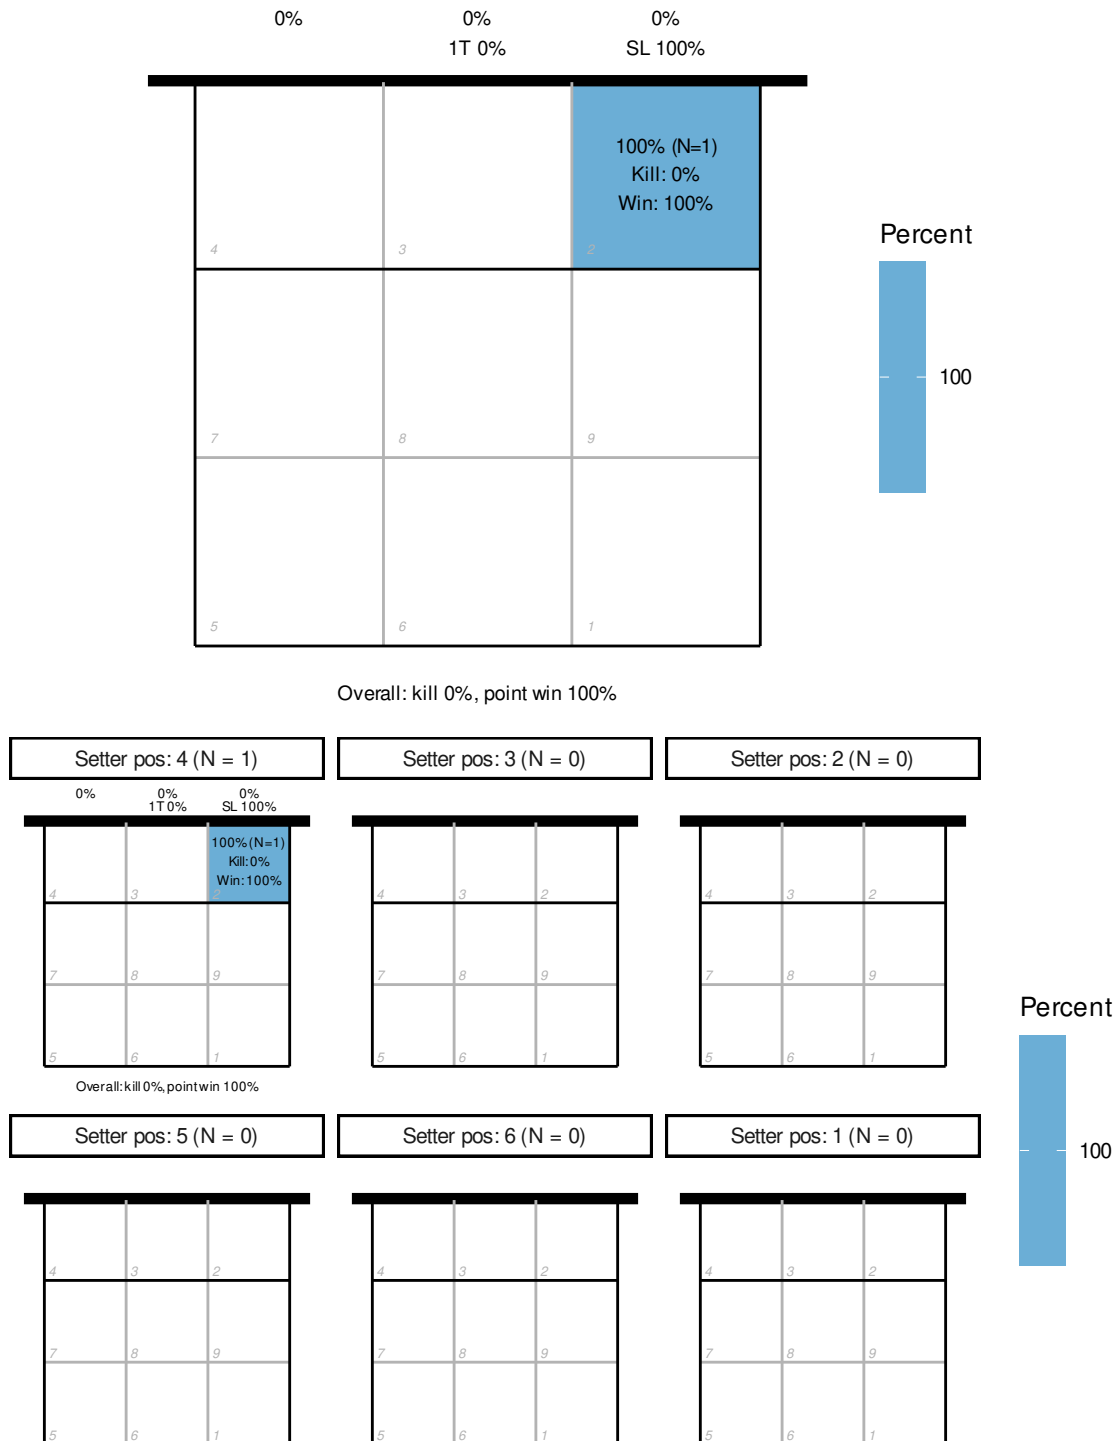

8.1.5 With setter call KF (perfect/good reception only)

KF called on 100% of perfect/good receptions (6 of 6). By rotation:

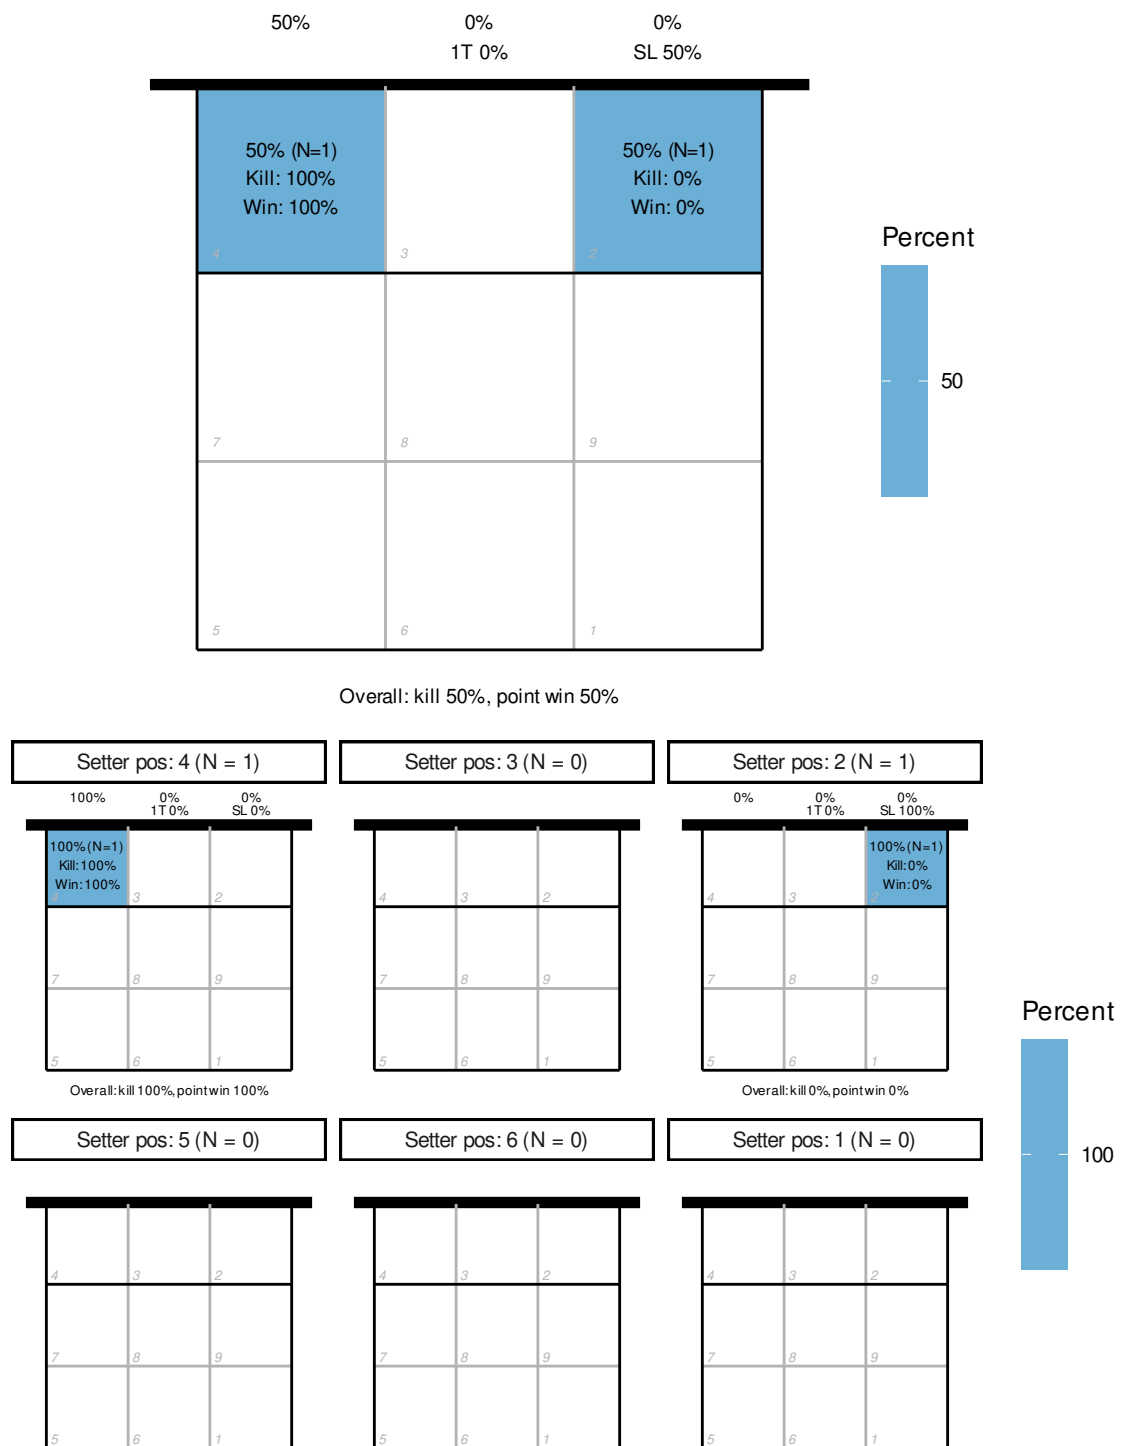

8.1.6 Setter shifted to 2 (perfect (#)/good (+)/OK (!) reception only)

('Shifted to 2' means that the pass went to zone 2 and the setter sets from there.)

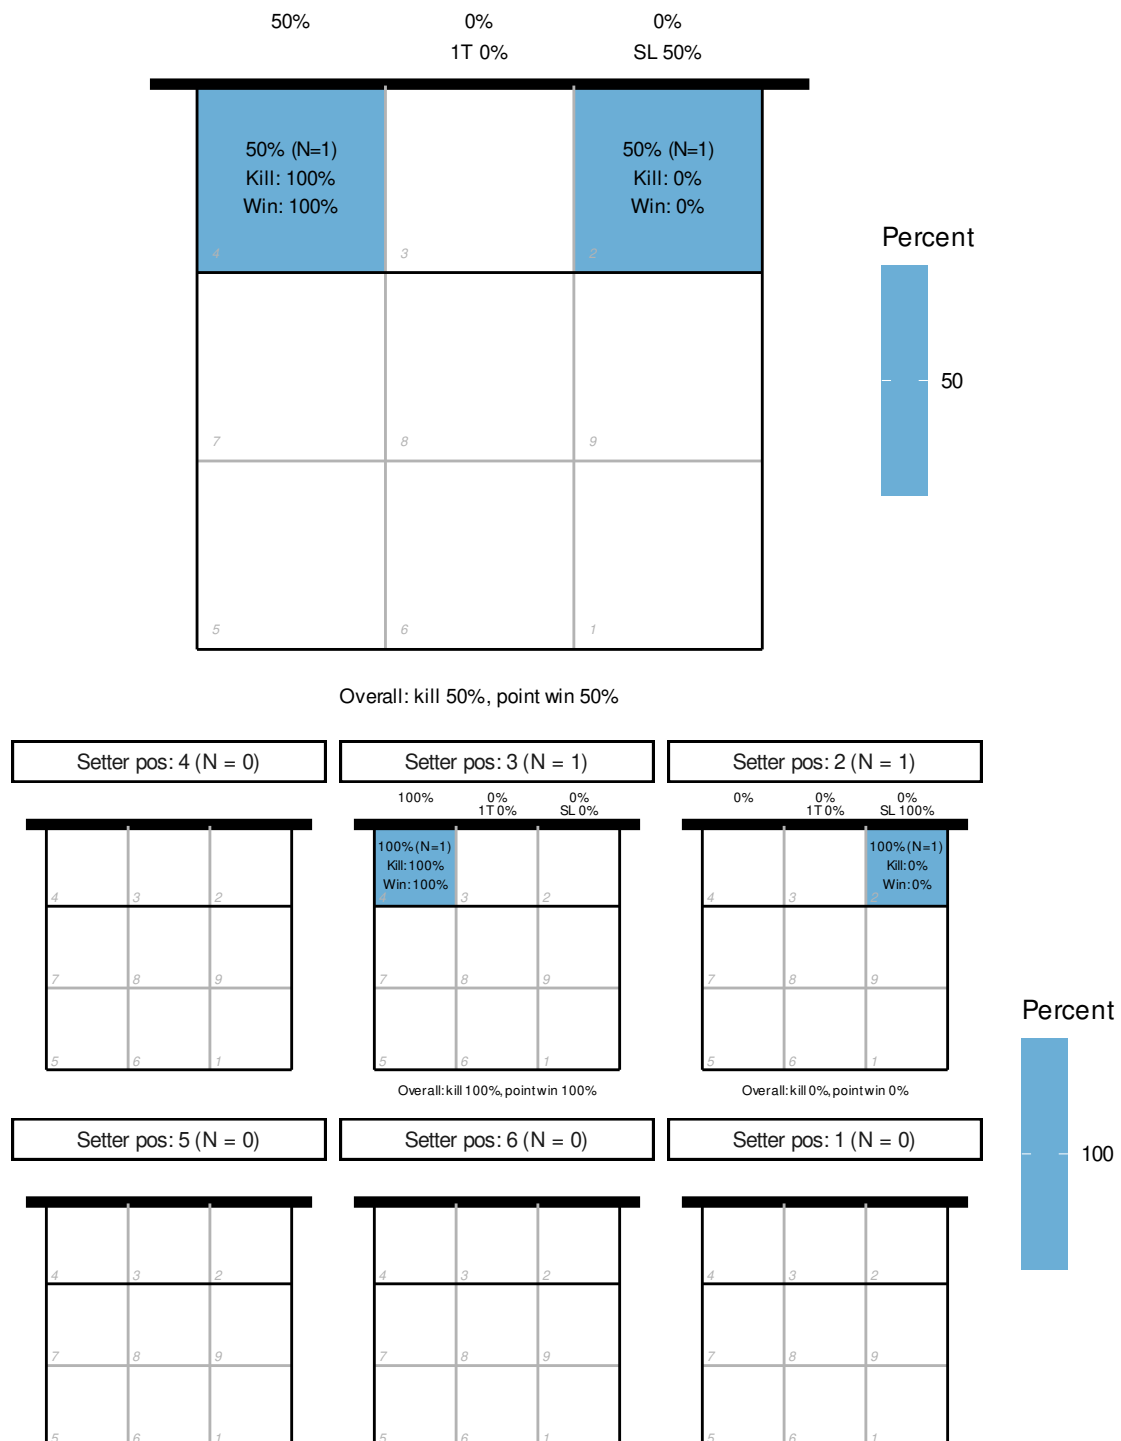

8.1.7 Setter shifted to 4 (perfect (#)/good (+)/OK (!) reception only)

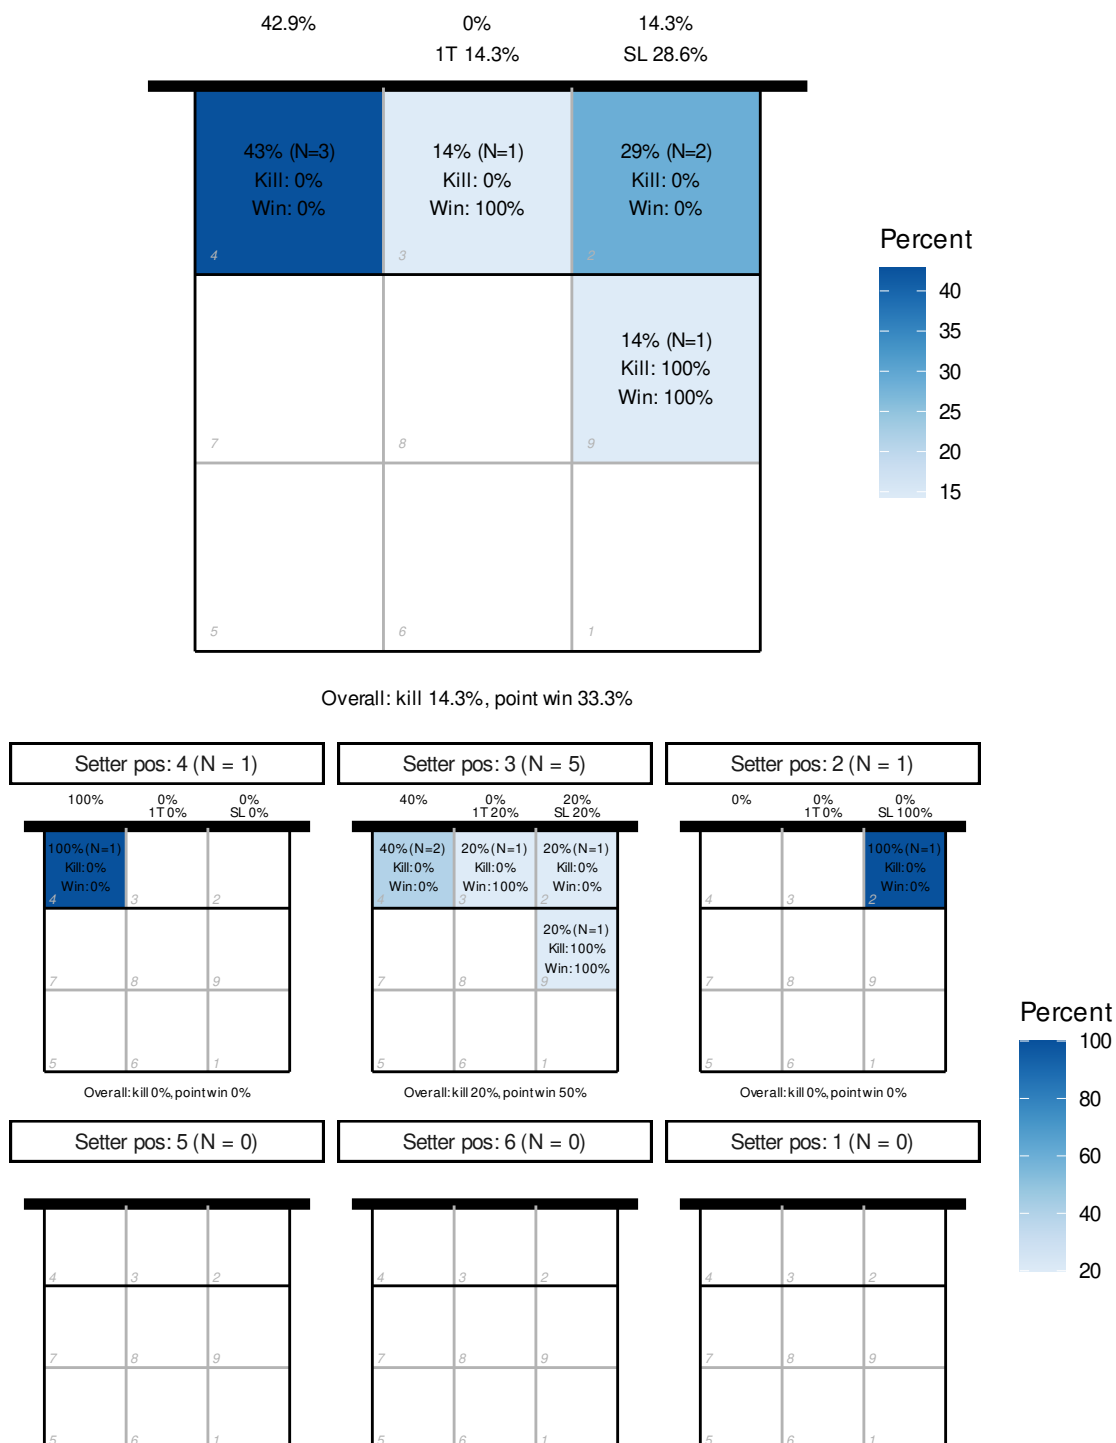

('Shifted to 4' means that the pass went to zones 4, 3C, or 3D and the setter sets from there.)

8.1.8 Setter beyond the 3m line, reception only

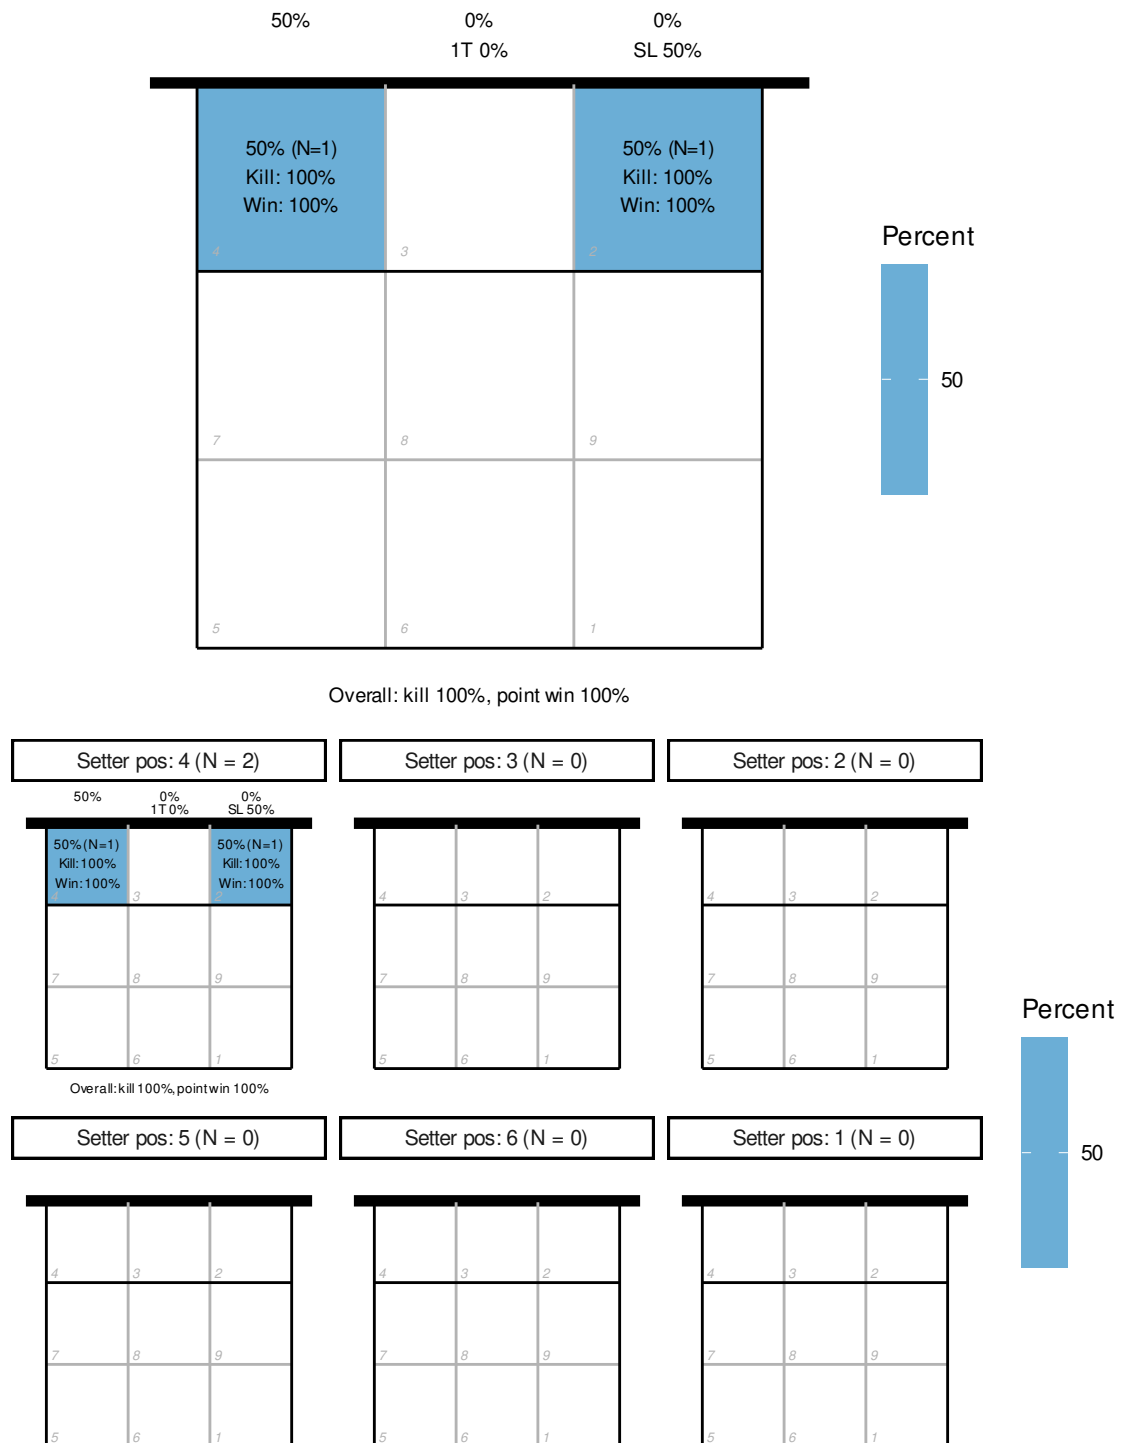

8.1.9 In transition (perfect/good dig only)

8.1.10 In crunch time (perfect/good reception only)

Crunch time is defined as:

- in sets 1-4: scores of 18-18 or higher, and a margin of two points or less (e.g. scores of 18-20 or 23-22 are crunch time, but 16-18 and 18-21 are not)
- in sets 5: scores of 8-8 or higher, and a margin of two points or less (e.g. scores of 11-10 or 9-11 are crunch time, but 13-9 is not).

9.4 Middle attack

This section gives an indication of the contribution that middles make to their team in attack. The values given here are for *team* attack outcomes when the middle player in question is front row. They are based on attacks by all players on the team, not the just the attacks of the middle player in question. See the key at the end of this report for a full explanation of the columns, but briefly 'rec att' is reception attack, 'att%' is attack kill percentage, 'R#+' is perfect or good reception, 'trans att' is transition attack, and 'BP' is breakpoint phase (the team is serving)..

9.4.1 Reception attack

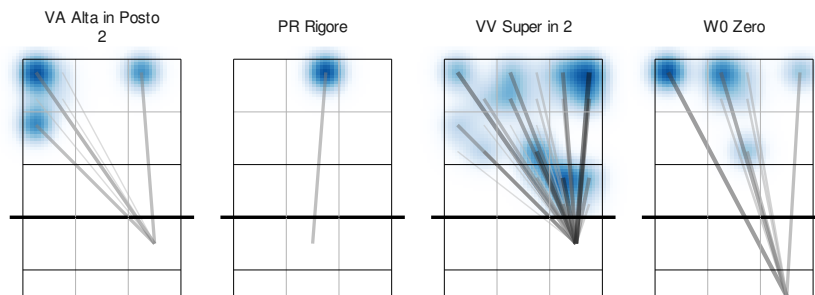

Number	Player name	N rec att	rec att%	SO%	N rec att R#+	rec att% R#+	SO% R#+
8	Giulia Marconato	18	33.3	61.1	14	42.9	71.4
12	Beatrice Molinaro	33	51.5	87.9	20	60.0	95.0
17	Valeria Pizzolato	27	40.7	44.4	17	58.8	64.7

9.4.2 Transition attack

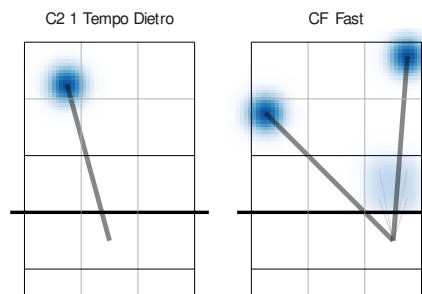

Number	Player name	N trans att	trans att%	trans win%	N trans att BP	trans att% BP	BP%
8	Giulia Marconato	21	23.8	50.0	12	8.3	33.3
12	Beatrice Molinaro	64	35.9	69.0	44	34.1	63.3
17	Valeria Pizzolato	21	19.0	46.2	11	27.3	71.4

9.6 Attack charts

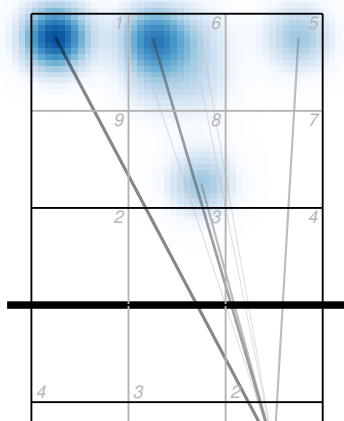

For each attacker, a breakdown by attack codes (X5, V5, etc) is given for those attack codes for which the player made at least 5 attacks.

Note that each table below is based on all attacks with the given attack code. However, the charts do not necessarily show all attacks. Attacks without position information will not be plotted.

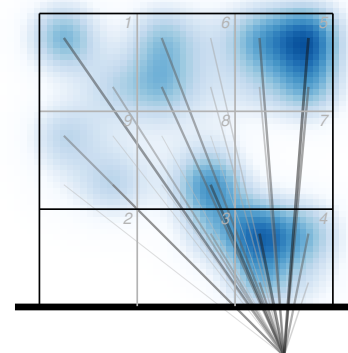

The charts only show attacks that had an outcome of: Kills, Other errors, All other attacks. Not included in the charts are attacks with outcome: Blocked attacks, Block control (recycled), Errors into net.

9.6.1 Emilia Weske (3)

11 Keys

11.1 Worksheet key

Sideouts

Statistic	Explanation
N OPP SRV	Number of serves by the opposition
SO	Number of sideouts (points won on reception)
SO%	Sideout percentage (percentage of points won on reception)
OPP SRV ERRS	Number of serve errors made by the opposition
OPP SRV ERR%	Opposition serve error percentage
mod SO%	Modified sideout percentage (sideout percentage excluding serve errors)
EXP SO%	The expected sideout rate based on the receiver's pass ratings and the dataset-wide sideout rates by rating. For example, 'perfect' receptions might correspond to a dataset-wide sideout rate of 0.7, and 'poor' to 0.4. If a given receiver had one 'perfect' reception and one 'poor' one, their expected sideout rate would be 0.55.

Reception

Statistic	Explanation
N	Number of serve receptions
%PERF	Percentage of serve receptions rated as perfect
%POS+PERF	Percentage of serve receptions rated as perfect or positive
%ERR	Reception error percentage
%POOR	Percentage of serve receptions rated as poor
EFF	Serve reception efficiency [(number of receptions rated perfect or positive - number of errors - number of overpasses)/(number of receptions)]
EFF J	Reception efficiency on jump serves
EFF F	Reception efficiency on float/jump-float serves

Reception attack

Statistic	Explanation
N	Number of attacks during serve reception phase (i.e. first-ball attack on reception)
KILL%	Attack kill percentage
EFF	Attack efficiency [(number of kills - number of errors and blocked attacks)/(number of attacks)]
TOT	All receptions
REC #+!-/	receptions rated as perfect/positive/ok (no first tempo attack possible)/negative/poor (no attack possible)

Reception sideout

Statistic	Explanation
SO% TOT	Overall sideout percentage
SO% JUMP	Sideout percentage on jump serves
SO% FLOAT	Sideout percentage on float/jump-float serves

First ball sideout

Statistic	Explanation
FBSO% TOT	Points scored by first-ball attack kills (attacks on serve reception) as a percentage of the number of receptions
FBSO% JUMP	First-ball sideout percentage on jump serves
FBSO% FLOAT	First-ball sideout percentage on float/jump-float serves
OPP FBSO% TOT	The opposition's first-ball sideout percentage

Breakpoints

Statistic	Explanation
N	Number of serve attempts
BP	Number of breakpoints (points won on serve)
BP%	Breakpoint percentage (percentage of serve points won)
BP% JUMP	Breakpoint percentage on jump serves
BP% FLOAT	Breakpoint percentage on float/jump-float serves
mod BP%	Modified breakpoint percentage (breakpoint percentage excluding serve errors and aces)
EXP BP%	The expected breakpoint rate based on the server's serve ratings and the dataset-wide breakpoint rates by rating. For example, 'negative' serves might correspond to a dataset-wide breakpoint rate of 0.3, and an ace to 1.0. If a given server had one 'negative' serve and one ace, their expected breakpoint rate would be 0.65.
EXP OPP SO%	The expected opposition sideout rate. (This is effectively the same as 100-(EXP BP%), but excluding serve errors).
SRV ERRS	Number of serve errors
ACES	Number of serve aces
ACE%	Percentage of serves that were aces

Block

Statistic	Explanation
BLOCKS	Number of points won with block kills
POS	Number of positive block touches
BLOCK%	Block kills as a percentage of the number of attacks (excluding attack errors)
POS%	Positive block touches as a percentage of the number of attacks (excluding attack errors)
PT WIN POS%	Rally win rate on positive block touches (i.e. of those rallies in which the blocking team made a positive block touch, the percentage of those rallies that they won)
TOT	All blocks
TOT BP	Blocks in breakpoint phase (i.e. blocks by the serving team)
SER R	Blocks against first-ball (reception-phase) attacks
TRANS BP	Blocks in transition in breakpoint phase (i.e. by the serving team)

Attack

Statistic	Explanation
TOT	All attacks
TRANS	Transition attacks
N	Number of attacks
KILL%	Attack kill percentage
EFF	Attack efficiency [(number of kills - number of errors and blocked attacks)/(number of attacks)]
ATT/S	Number of breakpoint attacks (i.e. by the serving team) as a percentage of their number of serves
ATT/D	Number of breakpoint (serving team) attacks as a percentage of the number of serves on which the receiving team made an attack that was not blocked and not an attack error
K/D	Number of breakpoint (serving team) attack kills as a percentage of the number of serves on which the receiving team made an attack that was not blocked and not an attack error
CAR	Counterattack rate (percentage of opposition attacks on which a counterattack was made. Only opposition attacks on which there was a defensive opportunity are included - i.e. not block kills or invasions, and not attack errors or attacks that were recycled back to the attacking team. An attack off hands (i.e. with block touch, including an attack kill off hands) will count as a defensive opportunity unless it was immediately followed by a ball touch by the attacking team - in that case it was recycled back to the attacking team, so there was no opportunity to play defence on it)
CKR	Counterattack kill rate (percentage of opposition attacks on which a counterattack kill was made. Only opposition attacks on which there was a defensive opportunity are included, as for CAR)

Scoring by rotation (including serve errors)

Statistic	Explanation
OPP N SRV	Number of serves attempted by the opposition
SO	Number of sideouts (points won on reception)
SO%	Sideout percentage (percentage of points won on reception)
mod SO%	Modified sideout percentage (sideout percentage excluding serve errors)
N SRV	Number of serve attempts
BP	Number of breakpoints (points won on serve)
BP%	Breakpoint percentage (percentage of serves won)
+/-	(points won on serve) + (points won on reception) - (points lost on serve) - (points lost on reception)
P1/P2/etc	Setter in position 1/2/etc

Freeballs

Statistic	Explanation
N	Number of freeballs received
KILL%	Percentage of freeballs on which an attack kill was made
WON	Number of rallies won in which a freeball was received
%WON	Percentage of rallies won in which a freeball was received
TOT	All freeballs
F#	Freeballs rated as perfect
F+	Freeballs rated as positive

Errors and points won

Statistic	Explanation
ERRS	Number of errors made (attack, serve, set, freeball errors plus block net touches)
ERRS/100	Number of errors made per 100 rallies (serve, attack, set, and freeball errors and block faults)
ERRS2/100	Number of errors made (excluding serve errors) per 100 rallies (attack, set, and freeball errors and block faults)
PTS	Number of points earned (serve aces plus block and attack kills)
PTS/100	Number of points earned per 100 rallies
Earned BP%	Points won on serve (as a percentage of the number of serves) by serve aces or block or attack kills
Earned SO%	Points won on reception (as a percentage of the number of receptions) by block or attack kills
Usage rate	Points earned plus errors made as a percentage of the number of rallies

11.2 Team comparisons key

Statistic	Explanation
TRANS XYZ	Value of XYZ in transition phase (i.e. only including ball touches after the first attack/block on reception)
XYZ BP	Value of XYZ in breakpoint phase (i.e. rallies in which the team served)
SO% TOT	Overall sideout percentage
SO% JUMP	Sideout percentage on jump serves
SO% FLOAT	Sideout percentage on float/jump-float serves
mod SO%	Modified sideout percentage (sideout percentage excluding serve errors)
EXP SO%	The expected SO% based on the receiver's pass ratings and the dataset-wide SO% by rating. For example, 'perfect' receptions might correspond to a dataset-wide SO% of 70%, and 'poor' to 40%. If a given receiver had one 'perfect' reception and one 'poor' one, their expected SO% would be 55%
Earned SO%	Points won on reception (as a percentage of the number of receptions) by block or attack kills
R#+%	Percentage of receptions that were rated positive or perfect
FBSO%	Points scored by first-ball attack kills (attacks on serve reception) as a percentage of the number of receptions
KILL%	Attack kill percentage
EFF	Attack efficiency [(number of kills - number of errors and blocked attacks)/(number of attacks)]
REC ATT KILL%	Reception attack kill percentage
REC ATT EFF	Reception attack efficiency
R#+ KILL%	Reception attack kill percentage on receptions that were rated as perfect or positive
BP% TOT	Breakpoint percentage (percentage of serves won)
BP% JUMP	Breakpoint percentage on jump serves
BP% FLOAT	Breakpoint percentage on float/jump-float serves
mod BP%	Modified breakpoint percentage (breakpoint percentage excluding serve errors and aces)
EXP BP%	The expected BP% based on the server's serve ratings and the dataset-wide BP% by rating. For example, 'negative' serves might correspond to a dataset-wide BP% of 30%, and an ace to 100%. If a given server had one 'negative' serve and one ace, their expected BP% would be 65%
Earned BP%	Points won on serve (as a percentage of the number of serves) by serve aces or block or attack kills
ACE%	Percentage of serves that were aces
OPP KILL%	Opposition attack kill percentage
OPP FBSO%	The opposition's first-ball sideout percentage
BLOCK%	Block kills as a percentage of the number of opponent attacks, excluding attack errors
BLOCK% SER R	Block kills against attacks in reception phase (i.e. against the first attack by receiving team) as a percentage of the number of opponent attacks, excluding attack errors
ATT/D BP	Number of breakpoint (serving team) attacks as a percentage of the number of serves on which the receiving team made an attack past the serving team's block (i.e. not blocked and not an attack error)
CAR	Counterattack rate (percentage of opposition attacks on which a counterattack was made. Only opposition attacks on which there was a defensive opportunity are included - i.e. not block kills or invasions, and not attack errors or attacks that were recycled back to the attacking team. An attack off hands (i.e. with block touch, including an attack kill off hands) will count as a defensive opportunity unless it was immediately followed by a ball touch by the attacking team - in that case it was recycled back to the attacking team, so there was no opportunity to play defence on it)
ERRS/100	Number of errors made per 100 rallies (serve, attack, set, and freeball errors and block faults)
ERRS2/100	Number of errors made (excluding serve errors) per 100 rallies (attack, set, and freeball errors and block faults)
PTS/100	Number of points earned (serve aces plus block and attack kills) per 100 rallies

11.3 Setting key

11.3.1 Set repetition

Category	Explanation
After kill	How often does the setter go back to the same attacker after they made a kill? (Repeats must be within the same set and match, but not necessarily the same rally)
After error	How often does the setter go back to the same attacker after they made an error? (Repeats must be within the same set and match, but not necessarily the same rally)
After blocked	How often does the setter go back to the same attacker after they were blocked? (Repeats must be within the same set and match, but not necessarily the same rally)
Within rally	How often does the setter go back to the same attacker within the same rally? (Repeats must be within the same rally)
First transition in sideout	How often does the setter go back to the same attacker on their first transition attack if the first (reception-phase) attack was unsuccessful? (Repeats must be within the same rally)

11.4 Attacking key

11.4.1 Middle attackers

Statistic	Explanation
N rec att	Number of reception attacks by the team when this player was front row
rec att%	Team reception attack kill percentage when this player was front row
SO%	Sideout percentage when this player was front row
N rec att R#+	As for 'N rec att' but only on good or perfect reception
rec att% R#+	As for 'rec att%' but only on good or perfect reception
SO% R#+	As for 'SO%' but only on good or perfect reception
N trans att	Number of transition attacks by the team when this player was front row
trans att%	Team transition attack kill percentage when this player was front row
trans win%	Percentage of points won when a transition attack was made (by any player on the team) and this player was front row
N trans att BP	As for 'N trans att' but only in breakpoint phase (i.e. the team was serving)
trans att% BP	As for 'trans att%' but only in breakpoint phase (i.e. the team was serving)
BP%	The percentage of points won on serve when this player was front row

11.5 Blocking key

Statistic	Explanation
aA	Number of opposition attacks against this blocker, including attack errors
aA%	Opposition attack kill percentage against this blocker
aAeff	Opposition attack efficiency against this blocker
won	Of the rallies during which the opposition attacked against this blocker, the percentage of rallies won by the blocking team
bp won	As for 'won' but only including rallies during which the blocking team was serving
B#% ind	Block kills made by this individual blocker (i.e. block kills credited to this individual) as a percentage of opposition attacks against this blocker, excluding attack errors
B#% ind ALL	As for 'B#% ind' but including opposition attack errors
B#% team	Block kills (regardless of whether the kill was made by this individual player or the other blocking players) as a percentage of opposition attacks against this blocker, excluding attack errors
B#% team ALL	As for 'B#% team' but including opposition attack errors
B+%	As for B#% but positive block touches instead of kills
B-%	As for B#% but negative block touches instead of kills
expBO% ind	Experimental: expected block outcome, following a similar idea to 'expected sideout rate' for measuring pass quality. The expected block outcome is based on the blocker's block touches and the dataset-wide point win rates according to touch, including attacks on which no block touch was made. For example, a 'positive touch' by the block might correspond to a dataset-wide point win percentage of 60% (for the blocking team), a 'negative touch' to 30%, and 'no touch' to 20%. If a given blocker made one block kill, one negative touch, and one no-touch, their expected block outcome would be 50%. In order to try and separate an individual's block touch effects from touches made by the other blockers in 2-person or 3-person blocks, 'expBO% ind' excludes attacks that were touched by one of the other blockers (i.e. touches by a blocker other than the individual being reported on)
aA ind	The number of opposition attacks against this blocker, excluding attack errors and excluding attacks that were touched by one of the other blockers. This is the number of attacks used in the 'expBO% ind' calculations
expBO% team	As for 'expBO% ind' but regardless of whether the block touch was made by this individual player or the other blocking players
rec aA%	Opposition reception attack (the first attack directly after receiving serve) kill percentage against this blocker

11.5.1 By attack code/zone

Statistic	Explanation
TOT_XX	Total number of attacks of type XX against this blocker
XX%	Attack percentage of TOT_XX attacks against this blocker
XXeff	Attack efficiency of TOT_XX attacks against this blocker
XXpart%	Percentage of opposition XX attacks in which this blocker participated in the block
XX N blockers	Average number of blockers against each opposition XX attack

11.5.2 Middle blocking

Statistic	Explanation
Rallies won	Of the rallies during which the opposition attacked against this blocker, the percentage of rallies won by the blocking team
BP%	As for 'Rallies won' but only including rallies during which the blocking team was serving
BP% Rxx	As for 'BP%', but where the reception evaluation code was xx
B#% ind	Block kills made by this individual blocker (i.e. block kills credited to this individual) as a percentage of opposition attacks against this blocker, excluding attack errors
B#% ind ALL	As for 'B#% ind' but including opposition attack errors
B#% team	Block kills (regardless of whether the kill was made by this individual player or the other blocking players) as a percentage of opposition attacks against this blocker, excluding attack errors
B#% team ALL	As for 'B#% team' but including opposition attack errors
B+%	As for B#% but positive block touches instead of kills
B-%	As for B#% but negative block touches instead of kills
expBO% ind	Experimental: expected block outcome, following a similar idea to 'expected sideout rate' for measuring pass quality. The expected block outcome is based on the blocker's block touches and the dataset-wide point win rates according to touch, including attacks on which no block touch was made. For example, a 'positive touch' by the block might correspond to a dataset-wide point win percentage of 60% (for the blocking team), a 'negative touch' to 30%, and 'no touch' to 20%. If a given blocker made one block kill, one negative touch, and one no-touch, their expected block outcome would be 50%. In order to try and separate an individual's block touch effects from touches made by the other blockers in 2-person or 3-person blocks, 'expBO% ind' excludes attacks that were touched by one of the other blockers (i.e. touches by a blocker other than the individual being reported on)
aA ind	The number of opposition attacks against this blocker, excluding attack errors and excluding attacks that were touched by one of the other blockers. This is the number of attacks used in the 'expBO% ind' calculations
expBO% team	As for 'expBO% ind' but regardless of whether the block touch was made by this individual player or the other blocking players
aA	Number of opposition attacks against this blocker, including attack errors
aA%	Opposition attack kill percentage against this blocker
aA% HB/FB/1T	Opposition attack kill percentage for high ball/fast ball/first tempo attacks against this blocker
rec aA	Number of opposition reception attacks (the first attack directly after receiving serve) against this blocker
rec aA%	Opposition reception attack kill percentage against this blocker
rec aA% HB/FB/1T	Opposition reception attack kill percentage for high ball/fast ball/first tempo attacks against this blocker
rec aA% Rxx	Opposition reception attack kill percentage against this blocker where the reception evaluation code was xx
trans aA	Number of opposition transition attacks against this blocker
trans aA%	Opposition transition attack kill percentage against this blocker
trans aA% HB/FB/1T	Opposition transition attack kill percentage for high ball/fast ball/first tempo attacks against this blocker

12 Settings used for this report

Player roles from: Fixed rotation (S-H-M)

Serving

Minimum number of serves required for a player to be included: 5

Serve position data from: Guess

Generate individual serve charts? Yes

Reception

Minimum number of receptions required for a player to be included: 5

Reception position data from: Guess

Generate individual reception charts? Yes

Setting

Setters reported on: Ilaria Batte, Vittoria Prandi

Include set distribution by setter calls? Yes

Report on individual setters? Yes

Treat all first-tempo attacks as if they were from zone 3? Yes

Treat 'N' attacks (slide/fast) as first-tempo? No

Exclude negative reception from repetition analysis? Yes

Exclude highball attacks from repetition analysis? No

Attack

Generate individual attack charts? Yes

Minimum number of attacks required for a player to have charts shown: 1

Attack chart style: Guess

Attack codes shown on charts: XA, C1, CF, PR, VV, W0, XX

Attack codes excluded from charts:

Attacks to show on charts: Kills, Other errors, All other attacks

Attack types shown on charts: Hard spikes, Soft spikes, Tips

Blocking

Number of blockers from: Scouted number of blockers

Report on attacks by: Attack code

Attack codes to report on: CF, PP
